PASSWORD TIPS

1. Length

Use passwords that are at least 12 characters long. Longer passwords are generally more secure.

2. Mix Characters

Include a mix of uppercase and lowercase letters, numbers and symbols for a stronger password combination.

3. Avoid Common Words

Avoid using easily guessable words or phrases. Opt for a combination of random characters.

Bunnylover

Awesome! I love the functions of this website which can not only generate secured passwords but also can test the strength of it!

Skeletons

PassBlend is time saver for me. I used to having a hard time in generating a new password bcs I have a habit of changing them once a month. Now, I can change my passwords without figuring out by myself.

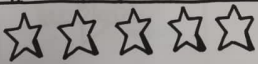

Unknown X

In my opinion, PassBlend is suitable for all of us especially for the students because it is free and also easy to use!

PassBlend

ABOUT

PassBlend Idea

Generating unique and secured passwords by blending your name and a significant year in your life customizing the length and including different character types for added security, non-guessable passwords with features like password-strength testing and premium offerings which can offer users enhanced security and educational resources. Password strength testing empowers users to make informed decisions about online security. Lastly, offering premium features for free sets a website apart and attracts more visitors, fostering a positive reputation.
